EDUCATION

- **University Of Missouri St Louis** St Louis, Missouri
Bachelor of Science in Computer Science; GPA: 3.25 *Aug. 2020 – Aug. 2022*
- **Missouri University Of Science and Technology** Rolla, MO
Bachelor's of Science in Computer Science (transferred) *Aug. 2015 – Jul. 2020*

EXPERIENCE

- **Accenture Federal Services** St Louis
Sr. Software Engineering Analyst *May 2022 - October 2023, June 2024 - Present*
 - **Reference Application Architecture:** Architected and developed a full-stack Scala application using Play Framework to serve as a production template for government client services. Designed system to dual-purpose as both a maintainable template mimicking legacy architectural patterns and a generic testable reference implementation. Integrated with existing arch-ng codebase, wrapping and extending Java/Scala modules for PostgreSQL, MarkLogic, Kafka, and AWS services. Owned complete lifecycle from architecture through complex Gradle build configuration, infrastructure provisioning, and deployment. Simultaneously mentored junior developer on application development while learning unfamiliar architecture, demonstrating technical leadership under ambiguous requirements.
 - **Technical Architecture:** Served as technical architect on agile teams spanning DevOps and software engineering, designing and implementing developer shared services and production infrastructure solutions across multiple environments including CMS FFM and TechArch initiatives.
 - **Developer Experience & Environment Management:** Designed and maintained developer environment provisioning scripts and tooling to improve team productivity. Configured complex local development setups including WSL integration with AWS LocalStack for local cloud development. Automated SonarQube alert suppression workflows and integrated code quality tooling into development processes. Invested significant effort troubleshooting and optimizing development environments, resolving configuration challenges that impact developer efficiency.
 - **CI/CD Pipeline Management:** Architected and maintained Jenkins CI/CD pipelines leveraging Nexus3, Gradle, and Ansible to automate building, packaging, and deployment of applications across production, testing, and development environments.
 - **Infrastructure as Code:** Configured, deployed, and maintained production AWS infrastructure for shared services using Jenkins and Ansible in a GitOps workflow, ensuring consistent and repeatable deployments.
 - **Security Automation:** Developed and deployed automated vulnerability and secret scanning pipelines for source code repositories on GitHub Enterprise, enhancing security posture across the organization.
 - **GitHub Enterprise Administration:** Administered internal GitHub Enterprise instance, managing access controls, teams, organizations, and repositories. Developed custom reporting and automation tooling in Python and Groovy to streamline operations.
 - **Technical Analysis & Documentation:** Authored comprehensive technical documentation analyzing software engineering toolchains and infrastructure. Conducted security assessments of system architectures and source code to identify and remediate vulnerabilities.
 - **Cross-Functional Collaboration:** Coordinated infrastructure improvements and upgrades across development, infrastructure, and security teams, ensuring alignment and successful delivery of critical initiatives.
 - **Research & Innovation:** Researched emerging technologies and delivered weekly presentations to technical teams, fostering innovation and knowledge sharing across the organization.
- **TEKSystems/Cisco** St Louis
DevOps Support Engineer *October 2023 - March 2024*
 - **Engineering DevOps Support:** Provided technical support and deployment services for Cisco's Engineering IT DevOps division, enabling seamless operations for engineering teams across the organization.
 - **ENGIT-BMS Support:** Supported and documented hardening initiatives for Cisco's enterprise build environment. Implemented automation for secure build host deployment using Ansible and Puppet, enhancing security and consistency.

- **CI/CD Support:** Diagnosed and resolved issues with Jenkins pipelines, GitHub Actions, and Artifactory, ensuring continuous integration and delivery workflows remained operational.
- **Containerization:** Supported and deployed containerized solutions using Docker, Podman, and Kubernetes for development and production environments, troubleshooting complex orchestration issues.
- **Observability:** Leveraged Splunk, Elasticsearch, Kafka, and Filebeat for monitoring and troubleshooting DevOps services. Authored Confluence documentation establishing logging standards for the build environment.
- **Source Control:** Supported and resolved issues across multiple GitHub Enterprise and Bitbucket instances. Troubleshoot source control integration problems within CI/CD pipelines.
- **Security Administration:** Managed and resolved RBAC configuration issues across Jenkins, Artifactory, LDAP, Duo SSO, and internal private cloud platforms, ensuring secure access control.

• Omni Federal

Software Engineer

Remote

August 2021 - February 2022

- **SABER:** Collaborated on development team building a newly commissioned web application for Air Force strategic resource planning, delivering mission-critical functionality.
- **SecDevOps:** Deployed applications to secure government cloud platforms through automated build pipelines utilizing GitOps, GitLab, and Terraform, adhering to strict security requirements.
- **Security Compliance:** Documented application security architecture to meet stringent government platform security requirements and compliance standards.
- **Full-Stack Development:** Developed features, resolved bugs, and maintained production codebase using React, Node.js, and MySQL within an Agile development framework.

• United States Geological Survey

Student Software Contractor

Rolla, MO

Jan 2020 - Jan 2021

- **Software Quality Assurance:** Developed and executed unit tests for Python and C++ GIS data processing applications, ensuring code reliability and performance.
- **Code Modernization:** Refactored legacy Python and C++ GIS processing software to improve maintainability and efficiency.
- **GIS Automation:** Automated geospatial data processing workflows using GDAL, reducing manual processing time and improving accuracy.
- **Test Automation:** Developed automated frontend testing suite using Python and Selenium to ensure application reliability.
- **Web Application Development:** Implemented GIS specification web application using Django, PostgreSQL, JavaScript, and HTML.

• Hunter Engineering

Software Engineering Intern

Bridgeton, MO

Jan 2019 - Aug 2019

- **Agile Development:** Collaborated within cross-functional teams following Agile methodologies including sprint planning, daily standups, and retrospectives.
- **Test-Driven Development:** Implemented test-driven development practices for C# microservices, ensuring high code quality and reliability.
- **Azure DevOps:** Leveraged Azure DevOps to automate build processes, testing pipelines, and static code analysis, improving development efficiency.
- **Native Library Development:** Developed high-performance native libraries in C++ with C# bindings for cross-platform integration.
- **Distributed Systems:** Contributed to delivery of a microservices-based distributed system architecture using C++ and C#.

• Missouri University Of Science and Technology

IT Student Co-op

Rolla, MO

Jun 2017 - Jan 2018

- **Team Leadership:** Led a team of part-time student employees, delegating and coordinating desktop administration tasks to ensure efficient operations.
- **Active Directory Management:** Developed and implemented Active Directory group policies for standardized desktop administration and security compliance.
- **Software Lifecycle Management:** Managed complete software lifecycle including packaging, deployment, updates, and licensing for enterprise desktop environments.

IT Student Employee

Jun 2016 - Nov 2019

- **Software Packaging:** Developed and tested enterprise desktop software packages using Perl and System Center Configuration Manager (SCCM).
- **System Deployment:** Provisioned and deployed physical desktops, virtual machines, and software packages via SCCM for campus-wide deployment.
- **VDI Solutions:** Packaged and optimized desktop applications for virtual desktop infrastructure (VDI) streaming environments.
- **Technical Support:** Diagnosed and resolved deployment and configuration issues in desktop lab environments, ensuring minimal downtime.

CERTIFICATIONS

- **Security+:** CompTIA
- **AWS Certified Cloud Practitioner:** Amazon

PROGRAMMING SKILLS

- **Languages:** Scala, Java, Python, SQL, C++, JavaScript, Bash, Groovy, Perl, C#
- **Technologies:** Play Framework, Gradle, Kafka, MarkLogic, PostgreSQL, AWS (CLI, LocalStack), Jenkins, Docker, Ansible, GitHub Enterprise, WSL, SonarQube/SonarLint, Maven, Nexus, Linux, Django, Selenium, Terraform, ZAPProxy, VMware, GDAL
